

Outperforms any paint by any measure.

The most versatile coating system ever invented.

Ultralast is a water-based, quick-drying, acrylic paint so tough it won't fade, blister or crack for many years after application. That's why we can guarantee Ultralast for 25 years.

The miracle membrane.

Once applied to a properly-prepared surface, Ultralast acts as a one-way membrane, allowing small amounts of moisture to escape to the surface (in the form of water vapour) but preventing moisture from penetrating the painted surface in the most aggressive conditions.

Insulating properties.

Ultralast also has outstanding insulation properties. Studies show buildings and roofs painted with Ultralast can deliver savings of \$1 per square metre per annum in energy costs.

Exposure to fire.

The unique formulation of Ultralast not only does not support combustion – it's actually a fire

retardant! In a fire, often it's the toxicity of the smoke which injures & even kills people. But Ultralast has a smoke toxicity index of zero.

Construction.

Architects and builders are increasingly specifying Ultralast because, especially in large industrial and construction applications, it virtually eliminates one of the main causes of "concrete cancer" – moisture penetration.

And on the interior, the tough Ultralast membrane endures industrial wear and tear far better than any other coating – even when applied to floors subject to heavy foot and even machinery traffic.

Damp environments.

The uniquely moisture-repellent properties of Ultralast are especially ideal for rising damp problems because the membranous nature of the

painted surface locks the moisture inside the wall so it won't damage the finished surface.

Even where there is moisture present, such as in humid tropical environments, Ultralast will actively repel fungi because, being non-organic, it cannot host life-forms.

So walls and ceilings coated with Ultralast will not support mould and mildew.

Renovating.

Very often, older houses show fine surface cracking on plastered walls. Covering with conventional paints doesn't work because, being porous, the paint simply soaks into the cracks, which remain visible.

But because Ultralast is membranous, it binds the deteriorated surface, covering the cracks, moving and stretching with the structure. Thus there is no need for re-plastering.

Coastal applications.

Sand, salt and wave spray reduces the life of conventional paints. But because of its

outstanding strength, Ultralast is untroubled by such aggressive environments, so it helps protect the structure of the building and looks much better for much longer.

Glazed roof tiles.

Ultralast will adhere to the glazed surface – and extraordinarily well. Once coated and allowed to dry, the tough membranous Ultralast is extremely difficult to scrape off, even when attacked with the sharp edge of a screw driver. Try this with any other paint!

As smooth as butter.

The paint flows from brush or roller with ease, giving a smooth painting action that's supremely satisfying to the most demanding painting professional.

The surface is silky, as brush marks even out instantly with each stroke of the brush. Ultralast dries quickly to a brilliant surface. So not only is Ultralast tough and durable in any application – it looks great on the job as well.

Surface marks, including graffiti.

Because the surface of Ultralast is a solid membrane, not only is it highly resistant to foreign materials, it also tolerates aggressive scrubbing.

So foreign dirt and marks (even graffiti) are easily removed, with far less effort. And if re-coating is required you won't see the loss of brightness or vividness when comparing the original coat to the new.

Unbeatable performance in every application.

Ultralast products are non-toxic, easy to apply, virtually odour-free, moisture, mould/mildew repellent and fire retardant with zero smoke toxicity.

The strongest yet most flexible coatings ever made... by any measure.

Ultra Coat

Interior/Exterior paint

Ultra NuPave

Extraordinary R12 rated, slip-resistant paving paint

Ultra Metal Treat

Super corrosion and UV resistant metal paint

Ultra Line Mark

Non-toxic, acrylic emulsion for high-traffic line-marking

Ultra Clear

Clear coat for use on all interior/exterior surfaces

Ultra Concrete Seal

Deep penetrating and waterproofing sealant for old & new concrete

Aqua Seal

Flexible, waterproofing membrane

Ultra FireGuard ClearCoat

Fire resistant, waterproofing clear finish for timber, fencing & thatch

Ultra FireGuard ColourCoat

Fire resistant, waterproofing colour paint for timber and fencing

Ultra RubberGuard

UV resistant, non-toxic, rubber based paint for corrosion protection

Ultra Bond

Super-penetrating primer that locks all Ultralast products to their substrates
