

Ultra Green Klean

Introduction:

Ultra green Klean is the most environmentally safe and biodegradable cleaning system to date offering a universal product that satisfies the function of detergents, washing liquids, soaps, solvent based and acidic degreasers. Each and every person can now claim a positive influence on the environment. It is a concentrate that is diluted for the various applications required.

Green Klean is a colloid based cleaning system that acts on the principal of bombarding dirt, grime and grease free at the Nano level(micelles). It is self acting and maintains continuous movement and oscillations naturally. These movements are influenced by quantity and temperature and time.

- **Quantity-** the concentrated product needs to be diluted with water at different rates for degreasing than sa dishwashing. This offers flexibility and environmental responsibility.
- **Temperature-** The higher the temperature, the faster the oscillations. For heavy duty degreasing such as car repair, industrial use, mining it is preferred, however the colder applications more time needs to be allowed for the product to work.
- **Time-** The effectiveness of Green klean increases with time as the bombarding particles work their way into the various levels of dirt or grease. For detergent type applications, the effectiveness is almost immediate, for greasy, oily floors, 5 – 15 minutes waiting time is recommended depending on age and solidity.

Green Klean sustainable credentials are:

- **Exceeds** all regulatory requirements - contains **NIL** rather than 'not more than' any component nominated by all known regulations
- **Infinite shelf life** , even in very harsh conditions
- **NO** acids, alkalis/caustics, solvents, phosphates, nitrates, sulphates, enzymes, bacteria
- **NO** hydrocarbon derivatives including widely used **nonyl phenols**

Advantage:

- Universal cleaning in one product
- Highest sustainable credentials
- Biodegradable in 21 days
- Friendly and safe including dishwashing and laundry

Applications:

Ultra Green Klean can be applied in any situation or application where cleaning and degreasing is required from softest to the hardest cleaning conditions. Some applications include:

- All home applications including mopping, laundry, car wash.
- Industrial degreasing - floors, metals, etc
- Commercial – window cleaning, carpet cleaning, kitchens and restaurants, etc
- Hospitals, Aged care, animal care where sensitivity matters
- All forms of plastic
- Building facades, concrete surfaces, cooling towers, metallic surfaces
- Mines – heavy vehicles, workshops, industrial belt and like machinery
- Where others fail, Green klean delivers.

Preparation:

- Add the recommended level of concentrate to water in ratios varying from 5:1 to 20:1 water to Green Klean respectively. Stir slightly and apply.
- For dish washing: fill container with required water quantity and add Green klean. For soaked dishes, just rinse. No scrubbing required.
- Application can be in forms of soaking, dipping, spraying, brushing, etc.
- Once applied, either rinse or wipe with sponge, cloth, etc.

Pride in Cleanliness safety, care and sustainability
