

Ultralast timber solutions

Timber is one the most favored construction materials in the world. Wood gives the feeling of comfort, style and represents our closeness to nature. Preserving wood is an essential part of maintaining environmental balance and is fully in tune with full sustainability.

Carbon warehouse Ultralast products preserve the timber products used giving it a new Life. We enhance the effectiveness of timber use aesthetically, safely and naturally while minimizing its replacement and maintenance. We further recommend treatment of existing new and old timber applications rather than replacement. Such applications include domestic fencing, timber houses, jetties, churches, interior finishes, etc

Our products are not combustible and give timber surfaces resistance to flame and heat and achieve spark resistance with zero flame spread.

Causes of timber deterioration, maintenance and replacement are:

- Rot
- Weathering
- Bores and Termite
- discoloration
- Fire

The severity of each of the above depends on proximity to sea, water/moisture, fire hazards and more.

Applications:

1. Stud walls, trusses and beams
2. Wall surface finishes
3. Floors and doors
4. Decorative interior finishes and restorations
5. Fencing and garden applications
6. Decking:
 - Verandas and walkways
 - Pool decks
 - Boat house decking and jetties
7. Etc

Guaranteed to outlast and out perform any other by any measure
